# Metal Technology enhances the Emerson façade

Extensive glazing for the Emerson Building at D2, Aberdeen has been facilitated with a suite of systems from Metal Technology, including curtain walling, windows and doors. The facility will support a range of services and solutions from both Emerson Process Management and Emerson Network Power, including a support service for customers with North Sea installations.

The design features a 2,600 square metre office accommodating sales and support, linked to a 3,065 square metre service centre. Metal Technology's System 17 high rise, capped curtain walling system was the product of choice for the expansive glazed façade. Ultra-flexible and aesthetically appealing, this structurally engineered system offers high levels of thermal and weather performance providing a cost-effective solution for the Emerson Building's designers.

Two products from the Metal Technology **THERMAL** range were also specified: System 4-35Hi+ windows and System 5-20D Hi+ high performance thermally enhanced doors.

The **THERMAL** suite of systems utilises bespoke thermal gaskets, cellular foams and polyamide thermal isolators contributing to impressively low U values across the range. The system design also offers full security compliance and a high level of weather performance.

## ABOUT EMERSON

Emerson, based in St. Louis, Missouri (USA), is a global leader in bringing technology and engineering together to provide innovative solutions for customers in industrial, commercial, and consumer markets around the world. Emerson Network Power, a business of Emerson, protects and optimises critical infrastructure for data centres, communications networks, healthcare and industrial facilities. Emerson Process Management is a leader in helping businesses automate their production, processing and distribution in the chemical, oil and gas, refining, pulp and paper, power, water and wastewater treatment, mining and metals, food and beverage, life sciences and other industries.
